1a) Characteristics of OR:

1. Interdisciplinary team approach:

OR involves a team of experts drawn from different scientific and engineering disciplines such as mathematics, statistics, engineering, economics, psychology etc.

2. Scientific Research:

OR uses techniques of scientific research to arrive at the optimum solution. In other words, suitable mathematical models are evolved after a careful analysis of the problem. The model is then solved using scientific techniques to get the optimal solution.

3. Wholistic approach:

OR always deals with a problem as a whole. Before arriving at a decision, it takes into consideration all possible interactions between various departments of an organization.

4. Profit and loss:

OR tools and techniques are extremely objective and strictly looks at maximization of profit and minimization of loss.

5. Imperfection of solutions:

By OR techniques, we may not obtain perfect answers to our problems, but certainly the quality of solution is improved from worse to bad answers.

QUESTION

(1)

1b) The problem's equations can be written as

$$\text{MAX } Z = 5x + 3y \quad \text{subject to}$$

with constraints, we have

$$4x + 5y \leq 1000$$

$$5x + 2y \leq 1000 \quad \text{and} \quad x, y \geq 0$$

$$5x + 8y \leq 1200$$

1. To get y intercept, set $x=0$,

$$4(0) + 5y = 1000 \quad \text{or} \quad 5y = 1000 \quad \text{--- (1)}$$

$$5y = 1000 \quad | :5 \quad \text{--- (1)}$$

so to get x intercept, set $y=0$

$$4x + 5(0) = 1000 \quad \text{or} \quad 4x = 1000$$

$$4x = 1000 \quad | :4 \quad \text{--- (2)}$$

2. To draw constraint, $5x + 2y = 1000$,

$$\text{set } y=0, \quad 5x = 1000 \quad \text{--- (3)}$$

$$5x = 1000 \quad | :5 \quad \text{--- (3)}$$

$$x = 200, y = 0 \quad \text{--- (3)}$$

set $x=0$,

$$5(0) + 2(y) = 1000 \quad \text{or} \quad 2y = 1000$$

$$2y = 1000 \quad | :2 \quad \text{--- (4)}$$

$$y = 500, x = 0 \quad \text{--- (4)}$$

3. To draw constraint, $5x + 8y = 1200$,

set $y=0$,

$$5x = 1200 \quad | :5 \quad \text{--- (5)}$$

$$x = 240, y = 0 \quad \text{--- (5)}$$

$$x = 240, y = 0 \quad \text{--- (5)}$$

$$y = 150 \quad \text{or} \quad 0, 150 \quad \text{--- (6)}$$

subject to

$$x_1 + 2x_2 \leq 10$$

$$x_1 \leq 5$$

$$x_2 \leq 4$$

$$x_1, x_2 \geq 0$$

By simplex method: $(0, 0)$

Introducing slack variables : $Z = x_1 + 3x_2 + 0S_1 + 0S_2 + 0S_3$

subject to

$$x_1 + 2x_2 + S_1 = 10$$

$$x_1 + S_2 = 5$$

$$x_2 + S_3 = 4$$

Iteration 1: \rightarrow

G	1	3	0	0	0	mintatio		
B	C_B	X_B	x_1	x_2	S_1	S_2	S_3	
S_1	0	10	1	2	1	0	0	5

S_2	0	5	1	0	0	10
-----	---	---	---	---	---	----

S_3	0	4	0	1	0	0	1
-----	---	---	---	---	---	---	---

$$Z = 0$$

$$Z_j - C_j \rightarrow \{-3\} \quad 0 \quad 0 \quad 0$$

\therefore entering variable: x_2

leaving basic variable: S_3
pivot element: 1

④

Iteration 2: →
